PBe Online Banking System Enhancement

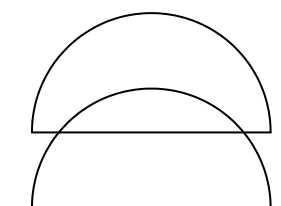

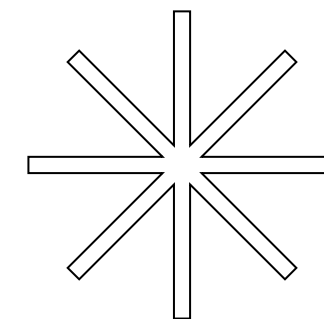

Proposal for RM 200,000 Entrepreneurial Grant

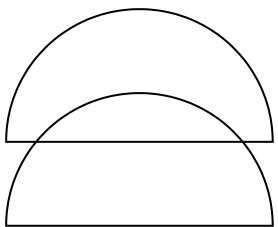

by Teh Ru Qian A23CS0191

INTRODUCTION

- Over 90% of Malaysians depend on online banking daily.
- But what happens when the app crashes during a fund transfer?

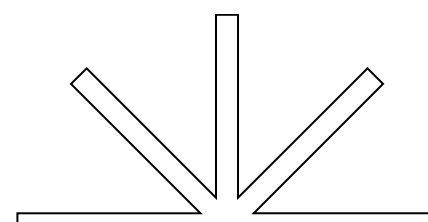

PROBLEM

Frequent Crashes and Lag in PBe

- Slow loading and freezing
- Failed transfer
- Transaction duplication
- Not optimized for older devices

TECHNICAL CAUSES

Server

Code

Network

- Server overloaded during peak periods
- High memory consumption (380-410 MB)
- Poor optimization for weak networks

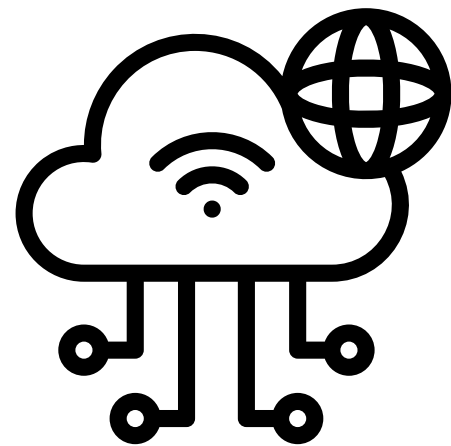

SOLUTION

Cloud Migration

- Move to AWS/Azure
- Auto-scaling during peak usage
- Reduced downtime

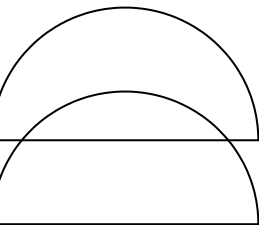

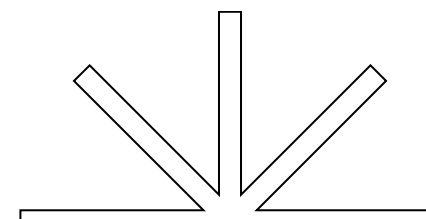

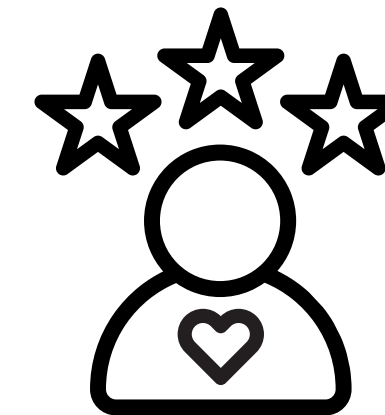

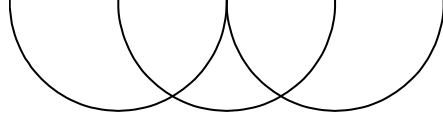

Code Optimization

- Reduce memory usage by 30%
- Faster loading time
- Better performance on older devices

Beta Testing + User Feedback

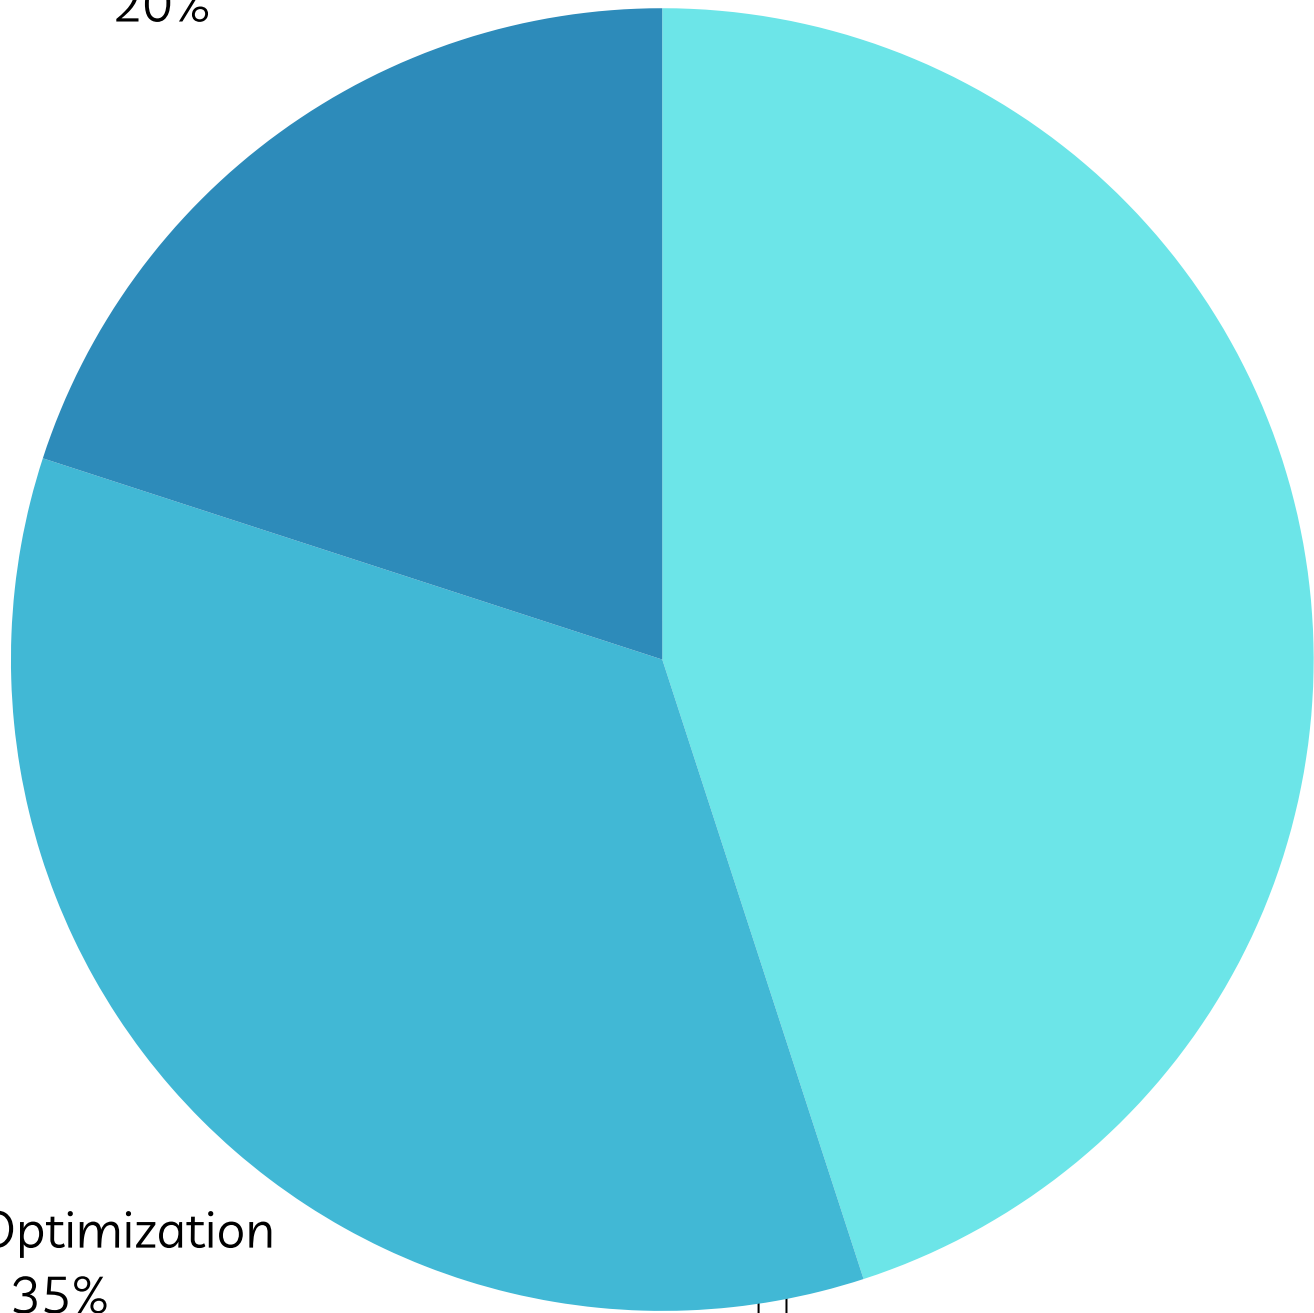

- Closed beta testing group
- Identify bugs early
- Continuous improvement

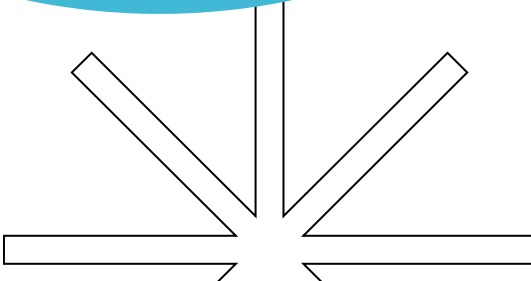

FINANCIAL JUSTIFICATION

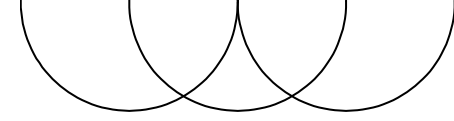

Beta Testing & Feedback
20%

Cloud Migration
45%

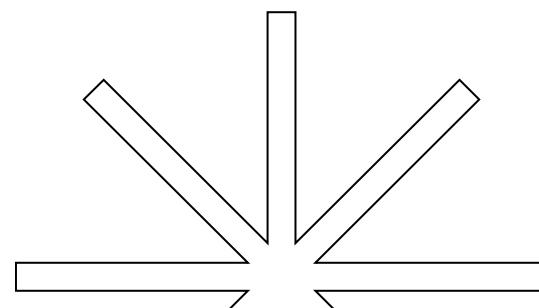

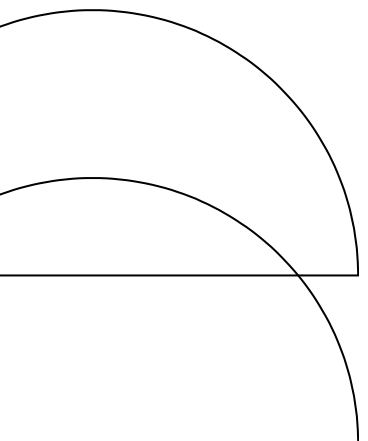

Code Optimization
35%

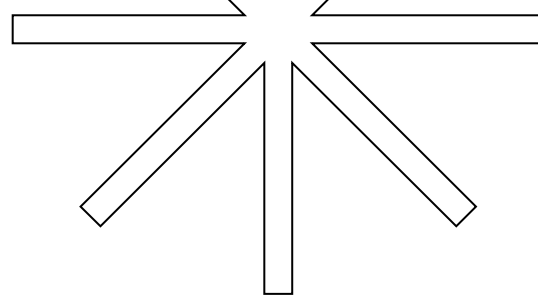

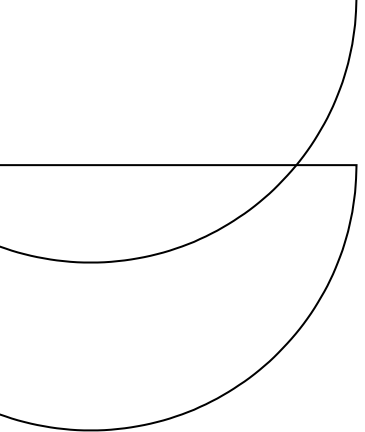

CONCLUSION

“A stable PBe system =
happier users + stronger trust + better digital future”

Thank You
